

2016 ULTRATAX CS, v.2016.3.2
User Bulletin UT-16.3.2: Update

February 17, 2017

This user bulletin explains changes related to UltraTax CS Platform.

CHANGES

UltraTax CS Source Data Entry utility

This update includes the following changes.

- The UltraTax CS Source Data Entry utility now requires login credentials to access the program, similar to other CS Professional Suite applications. Source Data Entry will also be part of single sign-on authentication. After you log in to one CS Professional Suite application, you will not be prompted to log in to subsequent CS Professional Suite applications opened during that session. For example, if you log in to UltraTax CS and then open the Source Data Entry utility, you will not need to enter your login credentials again.
- With this update, Source Data Entry is using a new format to save information about exported forms. This will improve speed for firms with large datasets. The old format will be converted automatically when Source Data Entry accesses a data location for the first time. This one-time conversion process should take a few seconds.
